

Tyler Stahl

FULL-STACK SOFTWARE ENGINEER | APPLIED AI DEVELOPER

Glen Rock, NJ 07452 | (206) 402-1346 | tylerstahl@gmail.com | linkedin.com/in/tyler-j-stahl

PROFESSIONAL SUMMARY

Full-stack software engineer and applied AI developer specializing in bridging advanced multi-agent workflows with intuitive, human-centered production environments. Brings 7+ years scaling data-dense web infrastructure for millions of annual users, with hands-on experience in structured extraction, hybrid LLM inference, durable state, and multi-agent orchestration. Combines technical execution with counseling and anthropology training to design resilient products that prioritize trust, transparent change management, and human-agent collaboration.

CORE COMPETENCIES

Applied AI: Multi-Agent Orchestration, Cloud/Local LLM Inference, Structured Extraction, Prompt Engineering, Autonomous Workflows, Human-in-the-Loop Design

Full-Stack: React, TypeScript, Python, Laravel, JavaScript, HTML5/CSS, Tailwind CSS

Backend & Data: GraphQL, REST APIs, SQLite, PostgreSQL, ETL and Data Pipelines

Delivery & Quality: CI/CD, Docker, Cypress, Playwright, Jest, Git, Accessibility, Agile Delivery, Technical Change Management

PROFESSIONAL EXPERIENCE

INDEPENDENT R&D | NJ

Applied AI Developer | February 2026 - Present

- Built and deployed a secure distributed-intelligence pilot using OpenClaw to coordinate specialized agents across orchestration, data analysis, and UI development.
- Engineered hybrid inference routing across Gemini and local Gemma models, reducing operational token costs by 40% while preserving deep-reasoning capacity.
- Developed Python ETL pipelines with SQLite state and automated Google Workspace reporting for long-running market-data workflows.
- Hardened agent operations with human approval gates, subagent gateway whitelisting, and secrets management through 1Password.

NATIONAL ALLIANCE ON MENTAL ILLNESS (NAMI)

Front-End Developer | December 2024 - January 2026

- Built a centralized component library that enforced architecture standards and accelerated consistent UI delivery.
- Developed Cypress end-to-end testing pipelines that reduced manual QA effort and improved release confidence.
- Led code-quality and accessibility audits and collaborated on cross-functional change initiatives that increased aggregate compliance by 30%.

CHARITY NAVIGATOR | NJ

Software Engineer | August 2023 - September 2024

- Engineered React and TypeScript features for a portal serving 50,000+ clients and sustaining events of up to 700,000 concurrent visitors.
- Supported migration of legacy data flows into GraphQL endpoints and partnered with product and data teams to streamline review workflows.

Front-End Web Developer | March 2019 - August 2023

- Partnered directly with the CMO and marketing team on a 20th-anniversary rebrand and time-sensitive digital launches.
- Helped deliver a platform rebuild for 11M+ annual users, translating agency designs into a production-ready system.
- Delivered full-stack initiatives that contributed to a \$5M grant and increased processing efficiency by 43%.

VOLANT WEB DESIGN | NJ

Founder & Web Developer | April 2017 - March 2019; September 2024 - Present

- Ship complete B2B solutions across PHP, JavaScript, HTML, and CSS, owning requirements, stakeholder translation, deployment, and SEO.

SELECTED APPLIED AI WORK

OpenClaw Multi-Agent Ecosystem: Autonomous market-intelligence workers with durable state, structured ETL, specialized agents, and human review gates.

Cognitive Bridge: Personality-aware AI alignment using the OCEAN model, Firebase, Firestore, Gemini, typed Python endpoints, and inspectable user-facing analysis.

AgentOS: Multi-agent workflow orchestration for complex tasks with evaluation, testing, and mandatory validation handoffs.

EDUCATION

Front-End Nanodegree, Udacity - Full scholarship, Google Grow with Google program

Master of Arts, Counseling, Seattle University - Applied to HITL workflows, stakeholder trust, and responsible AI adoption

Bachelor of Arts, Anthropology, Dartmouth College
